

Android Installation

Preparation

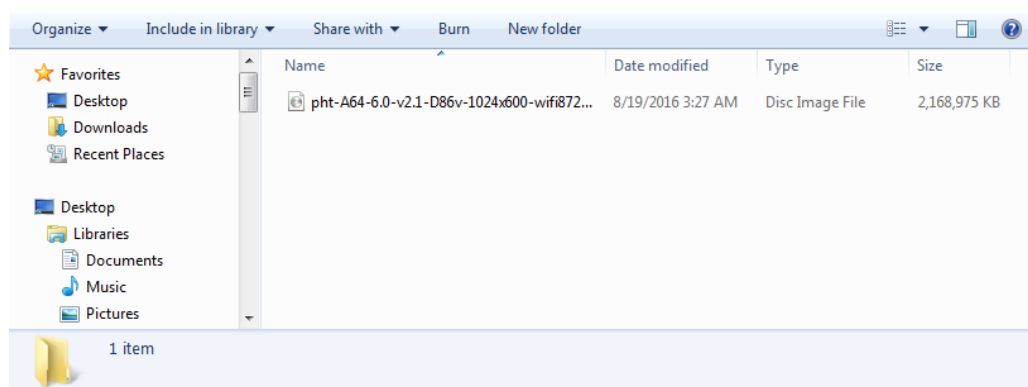

You will need the following:

- A USB Cable
- Phoenix Suit (which can be found [HERE](#))
- Your device's firmware (which can be found [HERE](#))
- A PC that is Windows 7 or higher
- A .RAR file-extracting program (7-zip, etc.)

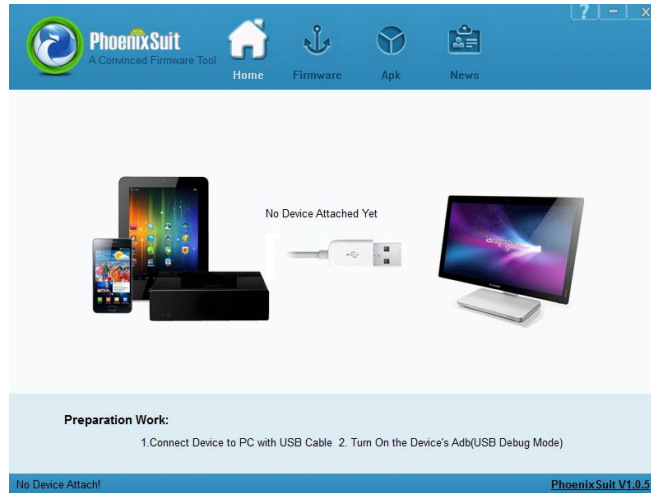

1.) Download and install Phoenix Suit

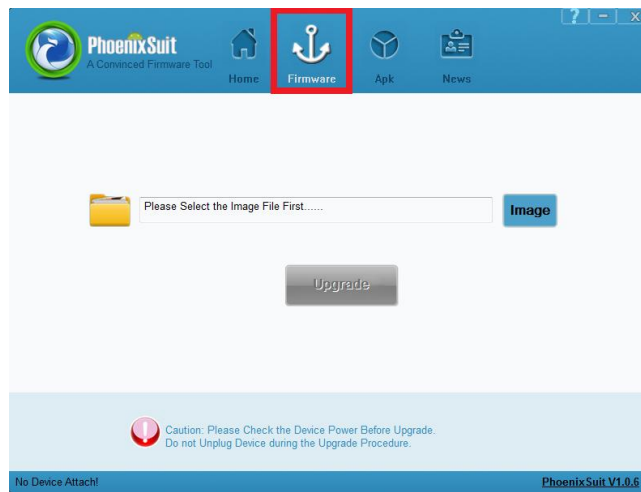

2.) Download and extract your device's firmware. (**NOTE: File name will be different than the example below**)

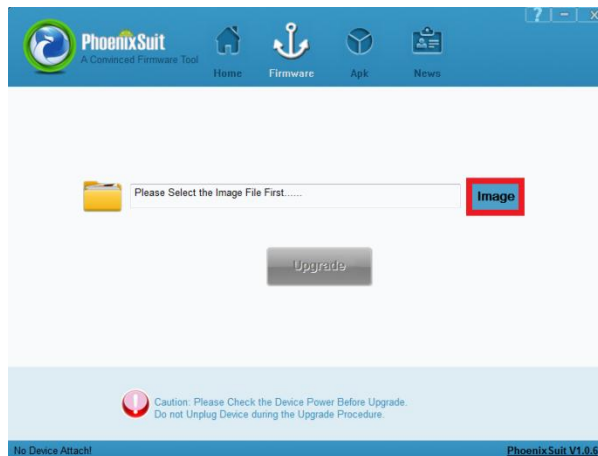

3.) Run Phoenix Suit

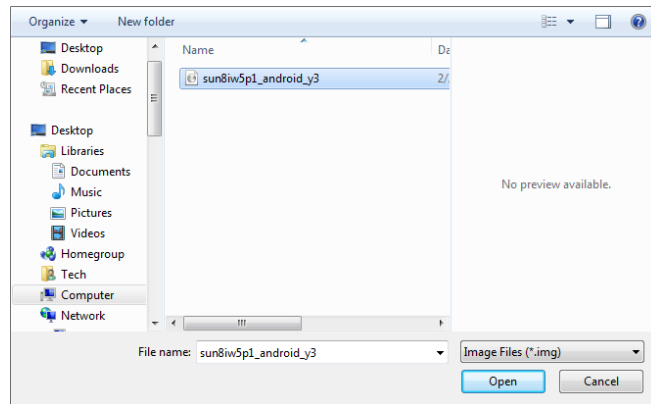

4.) Select the Firmware tab (the Anchor icon) highlighted in RED.

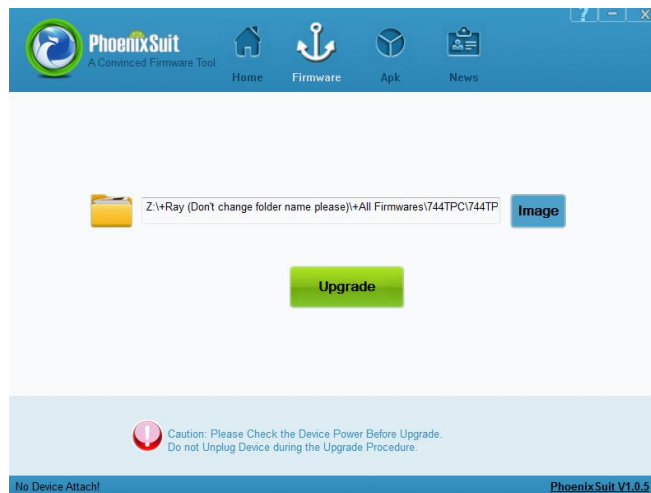

5.) Select the "Image" button (highlighted in RED).

6.) Select your device's firmware and select Open.

7.) Firmware will be loaded.

8.) With the firmware loaded, make sure your tablet is completely powered off.

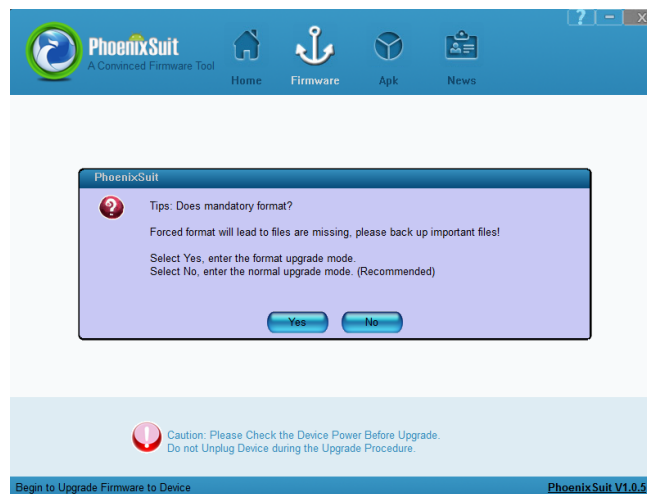

9.) Press and hold down the V+ Button (If your device has no Volume buttons, you can use the Return ↵ Button) and use your USB Cable to connect your tablet to your PC.

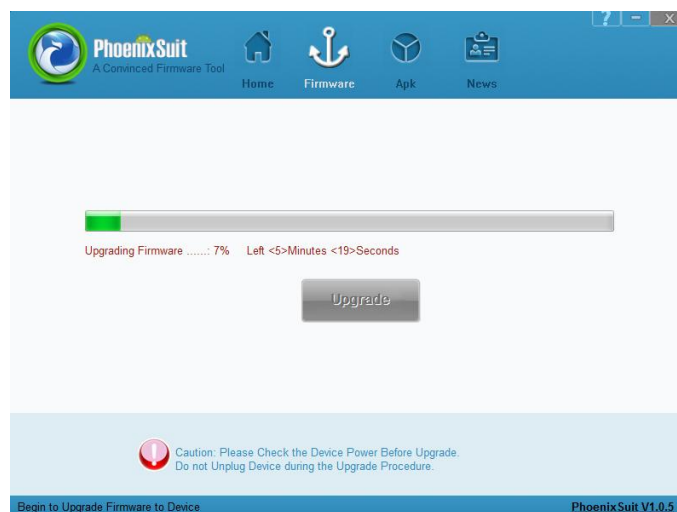

10.) Once you've connected your tablet to your PC, press the power button rapidly, while still holding the Vol+ or  Button.

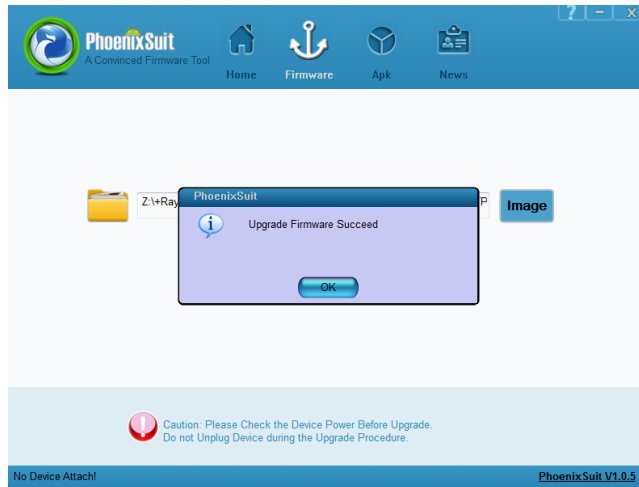

11.) If done correctly, you will be prompted twice. Select "Yes" both times.

12.) Firmware installation will begin. It will take a few moments.

13.) Message will pop up, saying that installation is complete. Click “OK” and disconnect the tablet.

14.) Tablet is ready for use.
